

Dear Madam/Sir <<Last Name>>,

Whether you have already returned to the classroom, or are about to in the upcoming school year, teachers and educators are being tasked with keeping students and staff safe, while still maintaining their already heavy load of caregiving and educating.

This case study illustrates how one preschool used the [Time Timer WASH](#), a visual timer for handwashing, to give their students the confidence and independence needed to properly wash their hands, so the teachers could continue doing what they do best - teaching.

### Using the Time Timer WASH in a Preschool Setting - Case Study

*Case Study Summary*

1. **Teach students of any age to wash hands properly and independently.**
2. **Free up valuable time in the classroom by supporting efficient handwashing processes.**
3. **Improve attendance and limit the spread of illness between students and teachers.**

***“The [Time Timer WASH](#) really helps the children to understand the length of time they should be washing their hands”***

As shown in the picture, the [Time Timer WASH](#) gives students the ability to independently wash their hands. It empowers the students to self-regulate and be confident that they are washing their hands for the correct duration.

A small tool like the Time Timer WASH implemented at the beginning of the school year can create a lasting routine in the classroom throughout the entire school year.

---

***“Because young children do not yet have a good sense of the passage of time, it will be important for adults to ensure that the handwashing process is done correctly and can be navigated successfully. The [Time Timer WASH®](#) is a product that can easily help to ensure that a young child goes through the appropriate process for effective handwashing, without needing an adult to monitor the amount of time they scrub.” - Eva C. Phillips, Ed.D.***

---

Since implementing the [Time Timer WASH](#) in their classroom and bathrooms, the teachers shared that this handwashing timer,

***“... helps to ensure proper hand sanitation and safety to our classrooms during the Covid-19 Pandemic.”***

However, the reach goes beyond the pandemic:

***Scrubbing hands for 20 seconds can increase attendance in school children and reduce the number of people in the general population who get sick up to 58%.***
